

Job Description – Solution Consultant Apprentice

Job Summary

As a Solution Consultant Apprentice at Palo Alto Networks, you will join a high-performing team dedicated to bridging the gap between cutting-edge security architecture and real-world production environments. This role is specifically designed for engineering graduates who are eager to translate their technical foundation into large-scale enterprise solutions.

Working alongside senior technical consultants, you will support the design, maintenance, and defense of multi-dimensional architectures and critical security frameworks. This is an exceptional opportunity to launch your career at the intersection of technical engineering, strategic consulting, and global cybersecurity.

Role Overview

We are seeking a highly motivated and technically grounded Apprentice to join our solution consultant team. This role is specifically designed for engineering graduates who have successfully completed their technical foundation and are eager to bridge the gap between academic theory and large-scale, real-world production environments.

As an apprentice, you will work alongside senior technical consultants to support the design, maintenance, and defense of multi-dimensional architectures and critical security frameworks.

Key Responsibilities

1. **Architecture & Design Support:** Assist senior technical consultants in drafting and reviewing multi-dimensional architectures and enterprise security frameworks.
2. **Technical Proof of Concepts (PoC):** Support the setup, maintenance, and validation of technical environments to demonstrate product capabilities to stakeholders.
3. **Infrastructure Defense & Maintenance:** Help monitor, configure, and troubleshoot critical network and cloud security components within production-like testing environments.
4. **Technology Research:** Investigate emerging cyber threats, cloud deployment strategies, and industry trends to provide data-backed insights for client solutions.
5. **Cross-Functional Collaboration:** Coordinate with internal product development, engineering, and support teams to align technical solutions with client expectations.
6. **Technical Documentation:** Maintain accurate records of architecture designs, deployment strategies, and configuration playbooks to help scale team knowledge.

Eligibility & Qualifications

- **Education:** BE / B.Tech in Computer Science or a closely related information technology discipline.
- **Academic Progress:** Must have successfully completed at least 3 years of your engineering curriculum (final year students or recent graduates eligible).
- **Core Knowledge:** Strong foundational understanding of Cyber Security fundamentals, operating systems (Linux/Windows), networking principles (TCP/IP, DNS), and basic cloud concepts.
- **Employment Status:** Must be an immediate joiner with no current full-time offer or active PF account (Preferred 2026 Batch).
